

POLVERE DI SOGNI

Polvere di Sogni is an exclusive Pesavento collection. Research into nanotechnology, and the application of these materials and processes, has resulted in a highly creative form of jewellery. It involves a powder with iridescent reflections, formed from natural particles in a variety of colours. Precision cutting into micro-hexagons enhances the sparkling effect and adds amazing brightness. Finally, using a very special technology, the particles are made to adhere to the silver surface.

The final result is a unique, distinctive product: stylish, pleasing, fun, and infused with light. The most common colours are black, bronze and antelope brown, combined with 18 kt rose gold plated silver; and grey and pearl grey, combined with rhodium or ruthenium plated silver.

The Polvere di Sogni collection was launched at Vicenzaoro in January 2011, following an intense period of research and experimentation, and continues to reinvent itself with new applications, attracting customers all over the world with its ability to amaze and fascinate.

DNA SPRING

An exquisite thread brushes the skin in a tender embrace. It wraps it softly, tracing beautiful rings of light. The DNA collection is based on a single element: silver thread. The thread is wrought and made supple, giving the collection an innovative design and an almost futuristic look, with reflections that are wonderfully bright and lively.

The DNA collection was first presented to the public in 2012. The debut version involved soft, light woven silver, able to shape itself beautifully to the contours of the wearer, and to illuminate the skin with its amazing reflections and colours. This was only the first step in the creative development of this collection. Further success came in 2015, when combined research and expertise resulted in the amazing new material of the DNA Spring thread.

DNA Spring is a unique, innovative product, formed from a sheet of 925 silver hammered thin and wrapped around a silver core. This is what makes it so silky and flexible. The special way of working the silver coating creates a multitude of glittering facets, giving the collection its extraordinary shimmering look. The collection comes in three different colours: Rose (Silver 925 plated with 18 kt Rose Gold); White (Silver 925 plated with Rhodium) and Black (Silver 925 plated with Ruthenium).

PESAVENTO

DNA SPRING & POLVERE DI SOGNI

Polvere di Sogni combined with the DNA Spring collection epitomises the essence of the Pesavento style: dreams, emotions, an ability to surprise and to spread happiness.

The combination of the two collections has led to the creation of extraordinarily innovative jewellery, earning Pesavento a variety of awards and mentions.

In 2016, it was classed as 1st Runner Up in the "Best in Innovative" category at the international Couture Design Award in Las Vegas.

In 2018, it was a finalist in the "Fashion Jewelry" category at the Inhorgenta Award in Munich.
